Setup & Configure a LAN using Switch & Ethernet cables

Aim:

Setup and configure a LAN (Large Area Network) using a Switch & Ethernet cables.

What is LAN?

A Local Area Network refers to a network that connects devices within a limited area, such as an office building, school, or home. It enables users to ~~see~~ share resources, including data.

How to setup a LAN:

Step 1: Plan and Design an appropriate network topology.

Step 2: You can take 4 Computers, a Switch with 8, 16, or 24 ports, and 4 Ethernet cables.

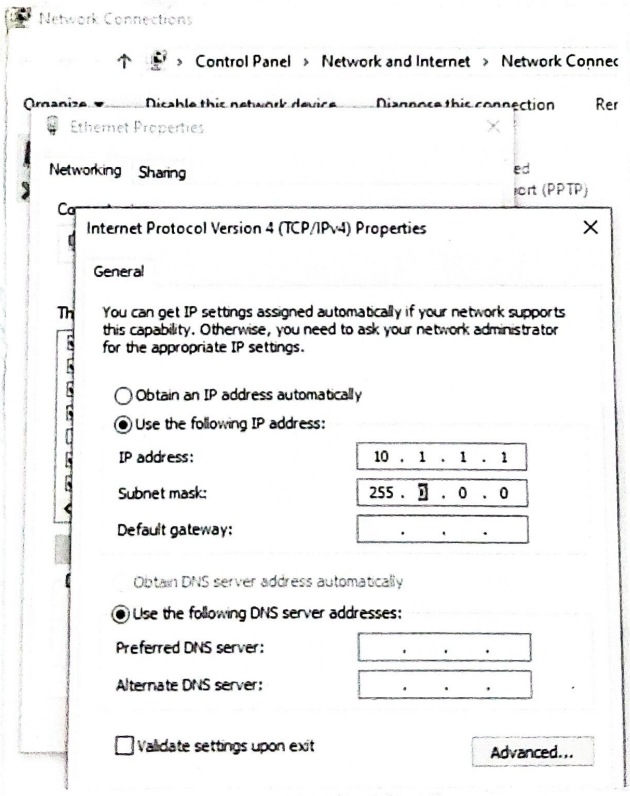

Step 3: Connect your computers to network switch via Ethernet cable.

Step 4: Assign IP address to your PCs.

Step 5: Configure a network switch.

Step 6: Check the connectivity between switch and other machine by using ping command in the command prompt.

Step 7: Select a folder, → go to properties, → click Sharing Tab, → share it with everyone.

Result:

The setup and configure a LAN using Switch & Ethernet has been completed.
